Types of Ceiling used in Building Construction and their ...

The span of a structural member is the horizontal distance from face to face supports, plus one half the required length of bearing at each end. The minimum bearing length for wood members is 1-1/2" bearing on wood and 3" bearing on masonry. If the member is continuous over supports, the span is the distance between centers of the supports.

INTRODUCTION

Replacing custom-built on-site structural support systems such as Unistrut, with Tate's Structural Ceiling Grid can offer many advantages. A structural data center ceiling allows you to pre-design and specify the support solution in advance and, best of all it's less expensive and faster to install.

channel. Available for flat or curved ceilings, arches and domes for maximum design flexibility. The Drywall Suspension System is an engineered framing system that installs faster than conventional framing methods.

Drywall Suspension System

Wind one nut down (29) to bottom of safety hook towards the loop. Add a lock washer (29) and slide safety hook through pilot hole. Slide lock washer (30) on top side of the safety hook and add nut (30). Tighten so lock washer on top and bottom of the structure are secure.

INDUSTRIAL CEILING FAN MANUAL

Stretch Ceiling Systems: A stretch ceiling is a suspended ceiling system that is composed of one large panel. The shape of the suspended ceiling is defined by the frame, which is usually custom designed and fabricated. The frame can be made to fit snugly against the walls of the room, or could be more sculptural, such as a wave-shaped frame
