SEDEMAC offers India's first indigenously developed CRDI (Common Rail Diesel Injection) ECU. CR-ECU controls an electrically operated injection system, which significantly improves the efficiency, minimizes Noise-Vibration-Harshness (NVH) and emissions over the conventional mechanical injection systems. CR-ECUs run highly complex control algorithms to ensure that the engine runs clean and efficient, in the full operating regime.

Common Rail Direct Injection (CRDi): Most modern engine's fuel systems use an advanced technology known as CRDi or Common Rail Direct Injection. Both petrol and diesel engines use a common 'fuel-rail' which supplies the fuel to injectors. However, in diesel engines, manufacturers refer to this technology as CRDi whereas Petrol engines term it as Gasoline Direct Injection (GDI) or Fuel Stratified Injection (FSI).

To lower engine noise, the engine's electronic control unit can inject a small amount of diesel just before the main injection event ("pilot" injection), thus reducing its explosiveness and vibration, as well as optimising injection timing and quantity for variations in fuel quality, cold starting, and so on. Some advanced common rail fuel systems perform as many as five injections per stroke.
