SI unit: m s^{-1} Symbol: v or u . Speed Speed is the rate of change of distance. It is a scalar quantity. $\text{Speed} = (\text{change in distance} / \text{change in time})$ SI unit: m s^{-1} Symbol: v or u . Note that speed and velocity are not the same thing. Velocity has a direction. Acceleration Acceleration is the rate of change of velocity. It is a vector quantity.

Looking over the answers to the chapter questions on kinematics, I feel strongly that two of the answers are wrong and give an incomplete view of the concepts. While I understand that this chapter focuses on motion in 1-dimension, chapter question 4 asks "Can an object have a varying velocity when its speed is constant? Explain."

Kinematics : 1. Rest and Motion : * An object is said to be in motion wrt a frame of reference S_1 , when its location is changing with time in same frame of reference S_1 . Fig: An object at rest. * Rest and motion are relative terms. * Absolute rest and absolute motion have no meaning. Motion is broadly classified into 3 categories : 1. Rectilinear and translatory motion.
