the gold into the Aqua Regina, then fill the beaker the rest of the way with sodium meta bisulphite. This solution will eat away any copper or other metals that may have been smelted into the gold when it was manufactured. The remaining gold substance will collect in the bottom of the beaker and will be pure 24k gold.

Gold fingers are typically found on PCI cards, ISA cards, or on Memory sims/dimmms/etc. They create the corrosion free connection between the computer and the expansion card. This process can also be used to recover gold from CPU such as Pentium Pro, or Cyrix or older 486 and lower generation chips.

gold. This gold is found in a number of places, including the plated gold leads referred to earlier, on plated pins inside the connectors and on the board in a number of places and on and within the ic (integrated circuits) on the board itself.

## **motherboards - Gold Refining Forum.com**

Refining Gold & other precious metals (including silver,

# Download Free Gold Refining From Computer Motherboards

palladium & platinum)  
from CPU's &  
electronics is typically  
not profitable unless  
it's done professionally  
and in large quantities  
on a large scale; when  
processing just a few  
items the cost is often  
higher than the value  
of the gold that is  
reclaimed.
