Material in this lab will be part of the Lab Practical. Your lab instructor will describe the format of the lab practical, which will require detailed identifications and functions. Make sure that you can find and identify each of the structures underlined in Lab 7, learn their function(s) and understand the adaptations in the comparative organisms.

### **Lab 7: Vertebrate Anatomy - OpenWetWare**

Fungi are a diverse group of eukaryotic organisms that usually grow best in dark, moist habitats. They receive their energy from outside sources by secreting, into the environment, enzymes that digest organic matter. Most fungi are saprophytes; the organic matter from which they take their nutrients is dead. Thus these organisms play an essential role in decomposition.
