The dynamic model represents the time-dependent aspects of a system. It is concerned with the temporal changes in the states of the objects in a system. The main concepts are – State, which is the situation at a particular condition during the lifetime of an object.

## Analysis Of Dynamic Systems

For the dynamic analysis of a variable-speed process, Chaari et al. proposed a dynamic model of a planetary gear for variable speed process, by modulating the meshing stiffness in Lin and Parker's model with the mean angular velocity [7,8]. That is, the pulse density of the meshing stiffness wave varies with the mean angular velocity.
