P0720 Ford Expedition

P0720 is a generic OBD II trouble code, which means that it has the same meaning for your Ford Expedition as it would any other vehicle. It indicates that your Expedition 's OSS (Output Shaft Speed Sensor) is reporting a malfunction. It's typically caused by a bad OSS, or a wiring problem.

Ford Expedition : P0720 → OSS Circuit → Malfunction ...

OBD-II Code P0720 definition: The speed sensor detects the revolution of the idler gear parking pawl lock gear and emits a pulse signal. The pulse signal is sent to the TCM which converts it into vehicle speed. Symptoms Symptoms of OBD code P0720

P0720 Ford

P0720 - Insufficient input from Output Shaft Speed sensor Description The output shaft speed sensor inputs a signal to the PCM, based on the speed of the output shaft of the transmission. The PCM compares this signal with the signal of the VSS or TCSS and determines correct tire size and axle gear ratio. Possible Causes OSS sensor circuit short to GND
