theory based, this text is intended primarily for the first-year graduate course in probability theory. The book focuses attention on examples while developing theory. There is an emphasis on results that can be used to solve problems in the hopes that those who apply probability to work will find this a useful reference.

Does anybody know
some good exercises to
supplement
"Probability with
Martingales" by
Williams (1991)? I
really like the book, but
I feel I need more
exercises to train with.
Ideally, I am looking for
a course based on that
book with available
assignments and
solutions. Any help is
appreciated! Thanks!
