MANUAL ON SEAWEED FARMING

Usually found attached to rocks, shells or other seaweeds from mid tide to 10 to 20 ft. below the intertidal zone. Dulse often hangs from rock faces or crevices, intermixed with rockweed. On the Maine coast it seems to flourish on rocky outcroppings with moderate turbulence, in nutrient rich reversing falls areas and anywhere there is good current.

Identification | Maine Seaweed Council

However, the identification of intertidal seaweed species requires high levels of taxonomic expertise. Therefore, a tool is being developed that may be used by less experienced persons to assist with the classification of water bodies. This tool utilises an alternative means of recording qualitative species data, which is to implement the use ...
