### Toe Walking Icd 9

Toe walking is walking on the toes or the ball of the foot. If your child is still toe walking after age 2, talk to your doctor about it. Make an appointment sooner if your child also has tight leg muscles, stiffness in the Achilles tendon or a lack of muscle coordination.

### Toe walking - Symptoms and causes - Mayo Clinic

Toe walking can be observed during a physical exam. In some cases, the doctor may do a gait analysis or an exam known as electromyography (EMG). During an EMG, a thin needle with an electrode is inserted into a muscle in the leg. The electrode measures the electrical activity in the affected nerve or muscle.

### Toe walking - Diagnosis and treatment - Mayo Clinic

Casting is another intervention used to stop toe walking. This procedure involves wearing a cast to stretch out the tendon. In most cases, the cast is applied every two weeks for a total of 6 to 8 weeks. Another treatment involves surgery. Long-leg casts are then worn for six weeks and followed by night splinting for several months.
